

Sealing device engineered to fill the gap between the door bottom and the floor or threshold plate.  
The seal is operated automatically by pressure against the door jamb on its adjustable plunger.  
The spring loaded mechanism retracts into the mortised aluminum case when the door is opened.  
Suitable for new and retro fit projects, the drop seal prevents the transfer of draughts, heat, light, dust, noise and smoke on door bottom gaps.  
A key part of the door sealing system, ensuring the barrier free access.
